NEUTRIK

BTESA IS COOL

At CABSAT 2011 BTESA will be showcasing its third generation high-power liquid-cooled transmitters, the LTD-C High Performance TV Transmitter Line. This new range comes just in time to meet operators' needs in high power TV transmission – up to 12 KWrms in all DTV standards (DVB-T/H, DVB-T2, ATSC and ISDB-T). When it comes to transmitters, protection and redundancy are the two key factors to be sure of.

Offering redundancy in power supplies and drivers, LTD-C transmitters can also grant protection in each subsystem at every level.
